

Data sheet

Temperature controller AVTB (PN 16)

Description

AVTB is self-acting temperature controller used to control the water temperature in hot water tanks, heat exchangers, oil preheaters, etc. Controller closes on rising temperature.

The controller has a control valve, thermostatic actuator and handle for temperature setting. Thermostatic actuator consist of a bellows, capillary tube and sensor.

Main data:

- DN 15, 20, 25
- k_{VS} 1.9, 3.4, 5.5 m³/h
- PN 16
- Setting range: 0...30 °C / 20...60 °C / 30...100 °C
- Temperature:
 - Circulation water / glycolic water up to 30%: -25 ... +130 °C
- Connections:
 - Int. thread
 - Ext. thread (weld-on and ext. thread tailpieces)
- Flow or return mounting, depending on sensor type.

Capillary tube length: 2 m.

- ¹⁾ Complete controller including sensor stuffing box. The immersion pocket is an accessory.
- ²⁾ Including small sensor Ø 9.5 × 180. The sensor is to be mounted where the system temperature is warmer than the temperature in the valve housing. Insulation disk is factory mounted on the controller.
- ³⁾ Including small sensor Ø 9.5 × 150. Capillary tube length 2.3 m.
- ⁴⁾ Including sensor Ø 18 × 210; available on request

Example:

Temperature controller, DN 15, k_{VS} 1.9, PN 16, setting range 30 ... 100 °C, t_{max} 130 °C, ext. thread

- 1× AVTB DN 15 Controller
Code No: **003N5141**

Option:

- 1× Imm. pocket, brass
Code No: **013U0290**
- 1× Weld-on taipieces
Code No: **003H6908**

Application principle

Installation positions

Temperature controller

The controller can be installed in any position, with flow in the direction of the cast-in arrow.

AVTB 0 ... 30 and 30 ...100 can be installed either in flow or in return line.

AVTB 20 ... 60 must always be installed in the return line (sensor warmer than valve).

With AVTB 30 ... 100, if temperature variations of more than 20 °C occur at the valve, insulation disk (003N4022) must be installed between thermostatic actuator and valve body.

If AVTB 20 ... 60 has been installed in the return line from a service water heat exchanger (where for certain periods the return temperature approaches the sensor temperature) the installation of insulation disk is recommended (003N4022). **Insulation disk is factory mounted on the product.**

Temperature sensor

Sensor Ø 18 × 210 mm ²⁾
(AVTB 0 ... 30 °C)

Sensor Ø 9.5 × 180 mm ¹⁾
(AVTB 20 ... 60 °C)

Sensor Ø 9.5 × 150 mm ²⁾
(AVTB 30 ... 100 °C)

¹⁾ The sensor is to be mounted where the system temperature is warmer than the temperature in the valve body
²⁾ The sensor can be mounted where the system temperature is either warmer or colder than the temperature in the valve body

Sizing

Sizing (continuous)

Example

Hot water temperature control in hot water tanks.

Primary medium:	Water
Given:	
Load:	31 kW (26500 kcal/h)
Primary temperature drop Δt :	20 K
Differential pressure Δp across the valve:	1.7 bar
Max. hot water temperature:	55 °C
Water volume Q:	$\frac{31 \times 0.86}{20} = 1.3 \text{ m}^3/\text{h}$

Required:
The correct valve size

$$k_v = \frac{Q}{\sqrt{\Delta p}} = \frac{1.3}{\sqrt{1.7}} = 1.0 \text{ m}^3/\text{h}$$

Temperature range and P-band

Calculated k_v value is 1 m³/h. From this value on the k_v scale in the AVTB diagram, take a line horizontally to intersect the columns for recommended sizing range. Select the smallest possible valve, here an AVTB 15. A temperature range of 30 ... 100 °C can be assumed as suitable for this example. The P-band (X_p) and final temperature range can also be read from the AVTB diagram. The required closing temperature can be read from the scale for the valve selected. However, there are two temperature ranges that meet the requirement for a closing temperature of 55 °C. X_p is 9 K for the range 30 ... 100 °C, which means that the controller will yield the calculated capacity at a sensor temperature of 55 °C minus 9 K = 46 °C. For the range 20 ... 60 °C X_p = 4 K. This means that the controller will yield the calculated capacity at 55 °C minus 4 K = 51 °C.

To ensure the most stable control an AVTB 15 with a range 30 ... 100 °C should be chosen. The water in the hot water tank will reach the closing temperature (55 °C) only when there has been no hot water demand for some time.

Note: The values stated are mean values

Design

- 1. Handle for temperature setting
- 2. Spring housing
- 3. Setting spring
- 4. O-ring
- 5. Diaphragm
- 6. Spindle
- 7. Valve body
- 8. Valve cone
- 9. Bellows
- 10. Bellows stop
- 11. Pressure stem
- 12. Temperature sensor
- 13. Sensor stuffing box
- 14. Housing of sensor stuffing box
- 15. Gasket of sensor stuffing box
- 16. Sealing bolt of sensor stuffing box

Settings

Temperature setting

Relation between scale numbers 1-5 and the closing temperature.

The values given are approximate.

Scale setting	1	2	3	4	5	
Closing temperature (0 ... 30 °C)		0	3	15	23	30 °C
(20 ... 60 °C)	20	35	50	60	70	
(30 ... 100 °C)	30	35	55	75	95	120
